endosalpingiosis are speculated to derive from the secondary müllerian system 3, 4, the demographics and clinical presentation of these two diseases was found to be very different in the present study. Endosalpingiosis appears to affect an older age group, with 40% of endosalpingiosis cases occurring in postmenopausal women.

What is endosalpingiosis? - ScienceDirect

Endosalpingiosis is surrounded by fibrous stroma; tubal type epithelial surrounded by ovarian stroma is a variant of endometriosis.

Associated with psammoma bodies.

Notes: Not associated with hemorrhage. In a lymph node, endosalpingiosis may

Access Free A Study Of

Endosalpingiosis is a condition in which fallopian tube -like epithelium is found outside the fallopian tube. It is unknown what causes this condition. It is generally accepted that the condition develops from transformation of coelomic tissue. It is often an incidental finding and is not usually associated with any pathology.
