- 1) When samples are paired, a two-sample t test is appropriate.
- 2) The degrees of freedom for a paired t test is  $n-1$ , where  $n$  is the sum of the two sample sizes.
- 3) A two-sample z-test is used to test hypotheses about  $p_1 - p_2$  with large independent samples

...

Bayesian inference is a method of statistical inference in which Bayes' theorem is used to update the probability for a hypothesis as more evidence or information becomes available. Bayesian inference is an important technique in statistics, and especially in mathematical statistics. Bayesian updating is particularly important in the dynamic analysis of a sequence of data.

...

And this condition we have seen in every type of condition for inference that we have looked at so far. So I'll leave you there. It's good to know. It will show up on some exams. But many times, when it comes to problem solving, in an introductory statistics class, they will tell you, hey, just assume the conditions for inference have been met.
