Api Gravity Temperature Correction Table

API Gravity Temperature Correction Definition: Definition of API Gravity at temperature: Estimate API Gravity at 60° F: 1) Usually, your API gravity reading will be at a temperature other than 60°F. To convert an API gravity reading to 60°F, we usually use ASTM Table 5B. The left and right margins of the table are annotated with the temperature. The upper margin lists the API gravity values.

Measure API Gravity. The API Gravity (American Petroleum Institute) is a value which is supposed to make it easier to compare one hydrocarbon to another. The determination of API Gravity is done in an exact manner as prescribed and detailed in ASTM D-1250. In the United States, API Gravities are usually determined at 60 °F whereas in Europe ...

API Gravity Definitions: Definition of API Gravity of water provided by Wikipedia : The American Petroleum Institute gravity, or API gravity, is a measure of how heavy or light a petroleum liquid is compared to water. If its API gravity is greater than 10, it is lighter and floats on water; if less than 10, it is heavier and sinks.

CPL, and CTPL) may be used as specified in other API Manual of Petroleum Measurement Standards (MPMS) Chapters. Including the pressure correction in this Standard represents an important change from the "temperature only" 1980 Tables. However, if the pressure is one atmosphere (the standard pressure) then there is no pressure correction and

5.2 This procedure is most suitable for determining the API gravity of low viscosity transparent liquids. This test method can also be used for viscous liquids by allowing sufficient time for the hydrometer to reach temperature equilibrium, and for opaque liquids by employing a suitable meniscus correction.

ASTM D287 - 12b(2019) Standard Test Method for API Gravity ...

The American Petroleum Institute gravity, or API gravity, is a measure of how heavy or light a petroleum liquid is compared to water: if its API gravity is greater than 10, it is lighter and floats on water; if less than 10, it is heavier and sinks.. API gravity is thus an inverse measure of a petroleum liquid's density relative to that of water (also known as specific gravity).
