ordinary differential equation (ODE) is a differential equation containing one or more functions of one independent variable and the derivatives of those functions. The term ordinary is used in contrast with the term partial differential equation which may be with respect to more than one independent variable.

An ordinary differential equation is a differential equation where  $X$  is locally  $\mathbb{R}$ , while a partial differential equation is any non-ordinary differential equation.

However, the main difference between locally  $R$  and locally  $R^n$  with  $n > 1$  is that the geometry is much more complicated in the latter.
