A pressure relief valve, an umbrella term which includes safety valves and expansion relief valves, is designed to do exactly that: relieve pressure on a system. Pressure reducing valves use spring-loaded mechanisms to control and relieve any excess pressure, and prevent any more fluid passing through until normal pressure conditions have been restored.

design? Farris has the solution with the Series 2700 Balanced Design pressure relief valve. The balanced effect is achieved by isolating the upper valve chamber and eliminating any back pressure build-up in the bonnet affecting valve set pressure. These valves are available in 1/2", 3/4" and 1" inlet sizes with a 1" outlet and two orifice areas.

Farris Engineering Pressure Relief Valves

Since the early 1940s, Farris Engineering has been at the forefront of the design and manufacture of spring-loaded and pilot-operated pressure relief valves. With over 70 years of proven performance, Farris has provided automatic and positive protection against over-pressure in Process, Steam Safety and Nuclear service, all with a full suite of industry approvals.
