The independent variable is graphed on the x-axis. The dependent variable, which changes in response to the independent variable, is graphed on the y-axis. Controlled variables are usually not graphed because they should not change. They could, however, be graphed as a verification that other conditions are

variable you control. It is called independent because its value does not depend on and is not affected by the state of any other variable in the experiment.

Sometimes you may hear this variable called the "controlled variable" because it is the one that is changed.

Independent and Dependent Variable

Download Free Identifying The

Controls And **Examples**

Think of an independent variable as a cause that produces an effect. A variable is a category or characteristic that's measured in an equation or experiment. An independent variable stands alone and isn't affected by other variables. In a scientific experiment, a researcher changes an independent variable
