Integers are like whole numbers, but they also include negative numbers... but still no fractions allowed! So, integers can be negative  $\{-1, -2, -3, -4, \dots\}$ , positive  $\{1, 2, 3, 4, \dots\}$ , or zero  $\{0\}$  We can put that all together like this: Integers =  $\{\dots, -4, -3, -2, -1, 0, 1, 2, 3, 4, \dots\}$

### **Whole Numbers and Integers - MATH**

In Maths, integers are the numbers which can be positive, negative or zero. These numbers are used to perform various arithmetic calculations, like addition, subtraction, multiplication and division. The examples of integers are, 1, 2, 5, 8, -9, -12, etc.

An integer is a whole number that can be either greater than 0, called positive, or less than 0, called negative. Zero is neither positive nor negative. Two integers that are the same distance from the origin in opposite directions are called opposites and when added cancel each other out making 0.
