Galton-Watson tree is a branching stochastic process arising from Francis Galton's statistical investigation of the extinction of family names. The process models family names. Each vertex has a random number of offsprings. The figure shows the first four generations of a possible Galton-Watson tree.

A good introduction, but the authors tend to jump around in their use of subscripts and notations. A stochastic process can be de: The process is called a continuous parameter process if  $I$  is an interval having positive length and a discrete parameter process if  $T$  is a subset of the integers.
