In the first lecture, he wrote, "In classical mechanics the state of a given system can be defined by giving the positions and momenta of the particles constituting it at a given time. In quantum mechanics one cannot specify a state in the same way since one cannot determine all the dynamical variables of the system at a given time.

These lecture notes compromise a three-semester graduate course in quantum mechanics given at the University of Illinois. There are a number of texts which present the basic topics very well; but since a fair quantity of the material discussed in my course was not available to the students in elementary quantum mechanics books, I was asked to prepare written notes.
