AHA/ACC Issue New Cholesterol Management Guideline

Since the 2013 ACC/AHA cholesterol guideline, newer cholesterol-lowering agents (nonstatin drugs) have been introduced and subjected to RCTs. They include ezetimibe and PCSK9 inhibitors, and their use is limited mainly to secondary prevention in patients at very high-risk of new atherosclerotic cardiovascular disease (ASCVD) events.

Desk Reference. Determine lipoprotein levels—obtain complete lipoprotein profile after 9- to 12-hour fast. ATP III Classification of LDL, Total, and HDL Cholesterol (mg/dL) Identify presence of clinical atherosclerotic disease that confers high risk for coronary heart disease (CHD) events (CHD risk equivalent): Clinical CHD.

ATP III Guidelines At-A-Glance Quick Desk Reference

Another notable change, according to Dr. Nissen, is that the new guidelines bring back the notion that lower levels of low-density lipoprotein (LDL) cholesterol are desirable and should be targeted and measured. LDL is a major cause of coronary artery disease and is the culprit behind most troublesome cholesterol buildup in the arteries.
