the foundation spreads out with a vertical-to-horizontal slope of 2:1.

Now, the values of (D_1 and D_2) can be calculated easily as will be seen later. Note: if the foundation is circular the value of ($\Delta\sigma'$) at depth (D) can be determined as following: $\Delta\sigma' = \frac{P}{\text{Area at depth } (D)}$
Area at depth (D) = $\frac{P}{v} \times (B+D)^2$ P =the load applied on the foundation (KN).
