Introduction to Probabilistic Graphical Models Problem Set #1 Solutions 2 Answer: The basic axiom to use here is the definition of conditional probability: (a) First, notice that in case  $P(E) = 0$  or  $P(B;E) = 0$  the equality is trivial (as for the second case  $P(B;E) = 0 \mid P(B;E) = 0$  or  $P(E) = 0$ ). Otherwise, we have  $P(A,B;E) = P(A;B;E) P(E)$  and

Probabilistic Graphical Models discusses a variety of models, spanning Bayesian networks, undirected Markov networks, discrete and continuous models, and extensions to deal with dynamical systems and relational data. For each class of models, the text describes the three fundamental cornerstones: representation, inference, and learning, presenting both basic concepts and advanced techniques.
