Separator Manual Oilfield - gamma-ic.com

The horizontal separator has several different advantages particular to this type of construction. Figure 10 illustrates a

typical horizontal high low pressure oil -gas separator with pneumatic controls. The horizontal high pressure double tube separator is illustrated by a typical example shown in Figure 15. The horizontal

OIL AND GAS SEPARATION DESIGN MANUAL

The two-phase type deals only with oil and gas, while the three-phase type handles oil, water and gas. Additionally, separators can be categorized according to their operating pressure. Low-pressure units handle pressures of 10 to 180 psi [69 to 1241 kPa]. Medium-pressure separators operate from 230 to 700 psi [1586 to 4826 kPa]. High-pressure ...

separator - Schlumberger Oilfield Glossary

Self-cleaning separators with disc bowl and automatic solids ejection are used where the percentage of solids in the oil is too high for manual cleaning. These are used mainly for the clarification and purification of fuel oils such as gas oil, diesel oil, heavy fuel oil and lube oil.

Separation Technology from GEA Westfalia Separator for

...

Pressure Vessel and Separator Fabrication and Manufacturing For The Oil and Gas Production Industry and Refineries. The Halvorsen Company fabricates pressure vessels and separators and provides manufacturing support for oil and gas refineries and the oil and gas industry. The Halvorsen Company is a custom steel fabrication specialist for oil ...

Pressure Vessels and Separators For Oil and Gas Production

Globally patented technology allows for efficient oil separation and recovery. Broad range of complete systems guaranteed to perform in toughest applications.

Separator Oil Water Separation & Removal Solutions

The separator is usually the first vessel in the tank battery. It's purpose is to separate the gas that is produced from the water and oil. Separators are not technically under high pressure, as their normal operating pressure is between 15 and 50 pounds.

Their max pressure is usually up to 150 pounds, however.

separators. Effluent from parallel plate separators is reported to have up to 60% less oil than conventional separators and the oil collected from these units contains less water. Inlet Oil Removal Outlet Settled Solids In conventional rectangular oil/water separators, more separation (higher flowrate or better effluent) is accom-

Oil/Water Tech Sheet

SEPARATORS: Two phase separators are utilized to separate the gas from the liquid in a well stream. This allows liquid free gas to be diverted to gas sales and/or to be utilized as fuel. Relatively gas free oil is then dumped to storage or to a treating system for removal of water. TWO PHASE SEPARATORS: Designed specifically for oil and gas.

Oil & Gas Equipment

The gas separators are constructed from carbon steel. An extra cost option of constructing the gas separator completely from stainless steel is available upon request. The OD of the outer barrel of the gas separator is the same OD as the tubing collar. The collar at the top of the separator is attached to the bottom of the pump seating nipple.

Echometer > Products > Gas Separators > Gas Separator Brochure

A Sand Separator is a high pressure vessel that separates solids, normally sand, from the process stream. The Sand separator is the first vessel placed after the wellhead and is typically rated over the wellhead shut in pressure. Sand separators are also known as sand traps and sand catches.
