Words) | Biology

Of the great mysteries that face modern biologists, one of the most intriguing concerns the development of the microscopic embryo into exceedingly complex plants and animals--into roses and cacti, elephants and blue whales, apes and human beings. How does one cell give rise to so many millions of cells?

reproduction. But, says
historian and Science
History Institute fellow,
Sara Ray, that curiosity
is piqued most
intensely when
something unexpected
happens. The study of
such “monstrous
births,” as scientists
once called them,
propelled forward our
understanding of how
embryos and fetuses
develop.
