Back in the days of leaded gasoline an experienced tuner would adjust the A/F mixture the engine was getting from its carburetor by reading the color the fuel left on the insulator of the spark plug in the exhaust port and in the

## **Tuning Engine Wira Carburetor - DrApp**

A good carburetor tune can make an engine, while a carburetor that's mistuned can literally break an engine. A good tune means the engine should start and idle without stalling, and respond instantly when the pedal hits the metal. The carburetor will also deliver the optimum air/fuel ratio throughout the engine's RPM range to achieve peak horsepower and torque. A mistune, on the other hand, can create all kinds of problems.

air filter and housing in order to access the carburetor. This may require the use of hand tools, however, many times the air filter and housing are secured using only a wing nut that can often be removed without using any tools. Step 2: Adjust the air fuel mixture. Use a flat head screwdriver to adjust the air fuel mixture.

### **How to Tune and Adjust Your Carburetor | YourMechanic Advice**

One of the keys to tuning for weather is the carburetor setup, jetting in particular. Here's an example: when the thermometer rises, the density of the air decreases. That effectively decreases the available oxygen to feed the engine. Carburetor jetting should be reduced to compensate and prevent an over-rich air/fuel mixture.

#### **Cara tuning carburetor iswara**

A carburetor is essentially a tube. There is an adjustable plate across the tube called the throttle plate that controls how much air can flow through the tube. You can see this circular brass plate in photo 1. At some point in the tube there is a narrowing, called the venturi, and in this narrowing a vacuum is created. The venturi is visible in photo 2
